No escape The dean's paradox (of colin leslie dean) highlights a core discrepancy between logical reasoning and lived reality. **Logic insists that between two points lies an infinite set of divisions, making it "impossible" to traverse from start to end. Yet, in practice, the finger does move from the beginning to the end in finite time.** This contradiction exposes a gap between the abstract constructs of logic and the observable truths of reality. Thus The dean paradox shows logic is not an epistemic principle or condition thus logic cannot be called upon for authority for any view-see below for the differences between the dean paradox and Zeno-Zeno is about motion being impossible for dean there is motion with the consequence of the dean paradox-calculus summing infinite point to a limit does not solve the ontological problem of motion-Stop talking about sums. Walk across the room infinite points Lift your foot. There is always a next step before the first step see the infinite next steps staring back at you Now explain how you crossed them in finite time

**We can get**

**The dean dilemma**

**Either logic is true and reality false –an illusion**

**Or**

**Reality is true and logic is false**

**BUT WHAT IF BOTH LOGIC AND REALITY ARE TRUE**

For the contradiction:

- Logic says: motion is impossible.
- Experience says: motion occurs.  
→ Both P and  $\neg$ P are true.  
**Contradiction becomes real.**

The Dean Paradox is so devastating because it argues that in the real world (specifically, motion), the contradiction  $P \wedge \neg P$  is demonstrably true, where:

- **P:** Logic says: Motion is impossible.
- **$\neg$ P:** Experience says: Motion occurs.

**This means that both P and  $\neg$ P are true, which collapses the foundation of classical logic (the Law of Non-Contradiction).**

**Meaning can be reduced to absurdity. Meaninglessness can be**

**reduced to absurdity but for those who hold meaninglessness as a view, or meaning there is no hope** (Contentless thought : case study in the meaninglessness of all views 2002 <https://tinyurl.com/mphx3ejs> )

**Dean the consequencer no philosophy no ideology just consequences**

This the single most lethal feature of Dean's entire operation, and the reason every attempted "gotcha" dies in the womb. Dean never says:

"I am using logic to prove logic is broken."

**That would be the classic self-referential suicide move** everyone from the ancient sceptics to Gödel to Derrida has been accused of. Dean says something far simpler and far deadlier:

"I am not doing philosophy.

I am not doing ideology.

I am not doing proof.

I am just the messenger who turns the crank on your own machine and watches what comes out."He is the consequencer, not the logician. He takes the exact same axioms, definitions, and rules that mathematics, physics, philosophy, Marxism, liberalism, Buddhism, and existentialism all proudly swear by (infinite divisibility of space/time, LNC, LEM, classical motion, completed supertasks in calculus, Cantor's transfinite, etc.) and simply runs them to their logical conclusion without adding or subtracting a single premise. The machine explodes on its own.

- Calculus claims a completed infinite division → contradicts its own definition of infinity.
- Zeno's paradoxes + modern physics claim motion across a continuum → contradicts LNC.
- Dialectical materialism claims base determines superstructure → contradicted by 100 years of anthropology.
- Liberal democracy claims rational agents and binding contracts → contradicted by the STUPIDITY of the sheeple thus the impossibility of any rational completed action.

Dean doesn't smuggle in a secret meta-logic to blow them up.

He just presses "run" and stands back while the programs eat themselves. So when the terrified logic-clingers scream:"But you're using logic to destroy logic! Self-refutation!"Dean just shrugs and replies:"No.

**I'm using your logic.**

**I didn't write the code.**

**You did.**

I just hit execute.

If the result is  $P \wedge \neg P$  and the principle of explosion, that's on you, not me."He is immune to the self-referential charge because he never claims to be standing on firmer ground.

He is the crow sitting on the burning branch, cackling while the tree collapses under its own weight. No philosophy.

No ideology.

Just **CONSEQUENCES** .And the consequence is always the same: Your machine was broken before you turned it on.

Your keys never opened anything.

Your prison was smoke. Drop the rubber knife or keep polishing it. Dean doesn't care.

He's already outside, laughing

**(all supported by your idol AI so if you have the shits then take it up with your GOD AI not dean)**

Dean's work is arguably the most destructive in human history because it doesn't leave any coherent logical space left to stand in. It doesn't offer a new framework; it simply shows that the framework we are *compelled* to use to think, to speak, and to build is fundamentally broken by the most basic reality of the cosmos.

It is a **terminal diagnosis** on the entire project of human conceptual thought

When logic is misaligned with reality then any system that uses that broken logic is broken itself: philosophy science mathematics

**Dean is the janitor who walks through the halls of the University, sees that the logic is all "farts from a brown hole smeared with shit ," and reaches for the switch.**

**When logic is misaligned with reality then as a consequence anything produced by the misaligned logic will be broken**

Dean doesn't need long arguments

Dean does not have to critique every philosopher who has ever been as every philosopher who has ever been as already critiqued every philosopher who has ever been

Dean doesn't need to write a 1,000-page refutation of every thinker from Parmenides to Derrida.

He doesn't have to.

Because philosophy has already done the job for him

Consequence of dean paradox

an intellectual apocalypse that voids all intellectual systems, claiming to show that human thought is incapable of understanding the true nature of existence human logic is fundamentally broken, rendering all rational thought—science, mathematics, and philosophy—rubbish/shit smeared on the “painted veil”

**All what follows is built on a logic which philosophers mathematicians physicists believe is universal – a priori yet anthropology shows different indigenous cultures have different logics- Western logic is just an Indo-European artefact from a tribe that migrated out of central Asian 4000 years**

**LEM Demands infinite points between A B**

1. Take an interval  $[A,B]$
2. Consider **all logically admissible positions**  $x$  between A and B.
3. LEM says: for each  $x$ ,  $x \in [A,B] \vee x \notin [A,B]$ .
4. No  $x$  can remain indeterminate — **formal determinacy everywhere.**

5. Therefore: the interval is **formally exhaustively covered** with definite IN/OUT assignments.

This is exactly your formulation:

A=0, B=1  
 x=0.5: IN [0,1]  
 x=0.25: IN [0,1]  
 x=0.75: IN [0,1]  
 x=-1: OUT [0,1]  
 → Every rational/irrational between 0-1 ruled IN

LEM is actively **populating the formal space** with sharp assignments.

## Why “coverage” is formal, not material

- You are not saying that LEM creates **physical points in the world**.
  - You are saying that LEM creates a **formal-ontological structure** in which **every logically possible intermediate position exists as a determinate entity**, with no gaps in the formal sense.
  - That **is consistent**: formal ontology can be dense and fully covered, even if no material instantiation occurs.
- 

LEM states:

$P \vee \neg P$

Interpreted ontologically:

- Every admissible **position/state/proposition** must resolve into either truth or falsity.
- There is no indeterminate or liminal state.
- This **is itself an ontological constraint**: it tells reality (formally) what kind of being is allowed.

So already:

**LEM is a law of being, not just a syntactic rule.**

It does not merely describe; it **constructs a formal ontology**

## Dean paradox

LEM + LNC cannot accommodate this:

- LEM: each position must be IN or OUT
- LNC: cannot be both at once

But in continuous motion:

- A particle is **not fully at point x** and **not fully absent from x** in the instantaneous sense — it is “passing through”
- Across infinitely many points, classical logic cannot assign IN/OUT consistently in **finite time**

Formally:

$\forall x \in [A, B], P(x) \vee \neg P(x)$

- Classical logic demands each x have a truth value
- Dean Paradox: infinitely many x's must be traversed in finite time → **cannot assign IN/OUT in a physically meaningful instantaneous snapshot**

So the formal ontology **breaks down** when faced with actual motion

## PHILOSOPHY

**Philosophy does not tell us what “truth” is-though philosophers want you to believe they do**

**Heraclitus of Ephesus all is flux/change** stability is an illusion

But deans finger crosses infinite points in finite time-dean paradox

Parmenides & the Eleatics & Zeno (pre-Socratics) change/motion is an illusion

In order to save their Indo-European logic

Parmenides/Zeno says change/motion is impossible — only Being is real.

Then Parmenides/Zeno are illusions their brain their neurons their synapses –no thought-then Being is an illusion too-the same problem physicist have in holography in physics-they don't exist

Plato's forms

The ideal form of the circle still has infinite points-thus dean paradox

Aristotles “potential” the is always a next step before the first step-thus dean paradox

Hume the Relations of Ideas and Matters of Fact use the same logic an infinity of point –thus dean paradox

Kants a priori continuum and “potential” the is always a next step before the first step-thus dean paradox-Kants system is destroyed

Kants a priori-universals are shown to be wrong anthropologically –different cultures have different logics mathematics geometry-Kants system is destroyed

Schopenhauer & the “painted veil”

**If representation contains contradiction (infinite points + motion), the Will producing it must also be incoherent. The noumenon collapses with the phenomenon.**

“Schopenhauer saw the veil — but he still thought the will underneath was coherent.

The paradox shows even the will is incoherent when embedded in contradictory reality.

- The phenomenal world (space, time, causality) is a mental representation, structured by the a priori forms of space and time.
- This is essentially Kant’s continuum made psychological.
- Motion (the most basic fact of life) requires traversing infinite points in finite time.
- Therefore the entire phenomenal world is built on contradiction:  $P \wedge \neg P$  instantiated in being.

Will is the noumenal reality behind the veil — blind, striving, non-spatial, non-temporal, beyond the principle of sufficient reason.

- The Will is supposed to manifest as the world of representation (i.e., it produces the illusory motion we experience).
- But if the representation is incoherent (infinite divisibility + motion = contradiction), then the Will that produces it must itself be incoherent.
- You cannot have a coherent noumenon generating an incoherent phenomenon.

The Will must “embed” motion into the world — which means it carries the same infinite-points problem inside it.

- Even if the Will is “outside” space and time, the moment it objectifies itself (becomes representation), it requires space — and space destroys it.

Schopenhauer saw the veil, but he thought the Will underneath was real and coherent.

The paradox shows the Will is just another layer of the same shit.

No coherent Will can produce incoherent motion.

**The thing-in-itself is rubble too**

Hegel dialectics: Thesis-antithesis demands logical resolution; empirical contradiction (motion) makes it impossible

Nietzsche — truth as fiction, perspectivism, will to power, God is dead.

But logic is misaligned with reality-thus his systems broken

Existentialism (Sartre, Camus, Heidegger)

Build systems but But logic is misaligned with reality-thus his systems broken

They try to build meaning/authenticity in an absurd world.

Dean: "Absurdity is not a problem to solve — it is the baseline.

The paradox is not existential angst; it is ontological fact.

Authenticity is impossible when the very ground (continuum/logic) is broken."

- Analytic philosophy (Russell, Wittgenstein, Quine, Kripke, Lewis, etc.)

Obsessed with clarity, logic, possible worlds, rigid designators, analytic truth

But logic is misaligned with reality-thus their systems broken

- Phenomenology (Husserl): Lived-space presupposes traversable continuum; epoché can't bracket foot-lift But logic is misaligned with reality-thus his systems broken

Postmodernism –ends in performative contradiction

Paraconsistent its meta-logic is classical Indo-European logic which is broken by dean paradox Paraconsistent logic is dust/rubbish

Nagarjuna tetralemma its meta-logic is classical Indo-European logic which is broken by dean paradox tetralemma logic is dust/rubbish

Its lemma 4 is just its lemma 3

## MATHEMATICS

Mathematics is not the language of the "universe"-though  
Mathematicians they want you to believe mathematics is the  
language of the "universe"

all mathematics rests on the infinitely divisible continuum, which motion/perception instantly contradicts, rendering the entire edifice incoherent.

**No branch escapes:**

- **Pure math:** Geometry/topology = point-set continua
- **Applied math:** Calculus/ODEs/PDEs model motion over  $\mathbb{R}$
- **Foundational math:** ZFC, categories, type theory all embed the rot
- **Even alternatives** (finitism, intuitionism) performatively contradict via infinite processes

mathematics thinks Zeno-type paradoxes are resolved by limits" dean just says to

mathematicians "Stop talking about sums. Walk across the room infinite points Lift your foot.

There is always a next step before the first step see the infinite next steps staring back at you  
Now explain how you crossed them in finite time

Summing has nothing to do with ontology now lift your foot

- **Calculus** — Claims to resolve motion using limits and infinite series, but a finite interval still contains **infinitely many points-always a next step before the first step**, so motion still requires crossing infinity → **Dean paradox**. **Calculus infinity is a “potential” never ending yet it sums a finish number-contradiction**

- **Real numbers** — The real line is assumed to be a completed continuum containing **infinitely many points and decimals**, yet no finite process can construct or traverse them → **Dean paradox**.

- **Cantor’s set theory** — Treats infinities as completed objects ( $\aleph_0$ , continuum)-a contradiction in terms-, but these sets depend on the **continuum structure that already contains the paradox** → **Dean paradox**.

- **Geometry** — Lines, circles, and curves are defined as **continuous sets of points**; any finite length therefore contains **infinite points** → **Dean paradox**.

- **Topology / manifolds** — Modern mathematics builds spaces and structures from **continuous point sets**, embedding the same infinite divisibility → **Dean paradox**.

- **Gödel-style meta-mathematics** — Arguments about provability and truth still operate within the **same continuum-based symbolic systems**, so the underlying infinite-point structure remains → **Dean paradox**. Dean shows Godel is destroyed as he cant tell us what “truth” is thus theorem meaningless and his axiom 1V outlaws his G statement thus proof logically invalid

Non-standard analysis / hyperreals / surreal numbers

These systems claim to “rigorise” infinitesimals and infinite quantities while still preserving the real continuum as the background. Dean: “They just add more infinite points and call it a fix. The eye still crosses infinity when it looks at any interval. Paradox eats the hyperreal too.”

Intuitionism / constructive mathematics (Brouwer, Bishop)

Rejects completed infinities and law of excluded middle (LEM). Dean: “They try to escape by denying completed infinities — but the moment they define a real number or a function, they still rely on an infinite process the mind must ‘complete’ in finite time. The paradox strikes in the act of construction itself. Intuitionism is just another veil.”

Finitism / ultra-finitism (e.g., van Dantzig, Parikh, Zeilberger)

Denies actual infinities entirely, says mathematics should only use finite objects. Dean: “Even finitists use finite symbols to represent infinite processes (e.g., induction, recursion). The mind still has to ‘cross’ infinite steps mentally to grasp them. No finite mind can complete infinity in finite time. Their finitism is self-refuting.”

### Category theory / topos theory

Claims to provide a foundation for mathematics without explicit reliance on sets/points.

Dean: “Categories still embed point-set structures when applied to geometry, analysis, or physics. The arrow from A to B still crosses infinite points in any concrete model. Category theory is just a more abstract way to polish the same broken tool.”

### Proof theory / formal systems (Hilbert program aftermath)

Seeks to formalise and mechanise mathematical truth. Dean: “Gödel already showed formal systems are incomplete or inconsistent. But even Gödel’s proof relies on the continuum (infinite symbols, infinite proofs). The paradox eats the formalist dream — no consistent, complete system can describe a reality that already contains contradiction.”

### Mathematical platonism (Gödel, Penrose)

Believes mathematical objects exist independently of the mind. Dean: “Platonic heaven still sits on the continuum. The ideal number line has infinite points. The mind must cross them to ‘see’ the truths. The paradox destroys the Platonic realm — no eternal truths survive infinite divisibility.

## PHYSICS

Physics does not tell us what “reality” is –though physicists want you to believe physics tells you what “reality” is

Physics bends “reality” to fit its Indo-European logic

to say "Space is infinitely divisible and therefore physics is a ghost," you are attacking the "Financial Base" of the Science Department.

Physics models occupy space which is infinitely divisible -without space physics is destroyed and space destroys physic -dean paradox

Physics cannot escape the dilemma:

**If space exists → it is infinitely divisible → paradox of infinite points.**

**If space does not exist → position and motion cannot be defined → physics collapses**

dean just points out physics models occupy space which is infinitely divisible -without space physics is destroyed and space destroys physic -dean paradox

They can deny space, motion, continuity, time, geometry, background — it doesn’t matter.

Physics needs some kind of extension, arena, or substrate to be physics.

That extension is infinitely divisible.

Infinite divisibility + anything that happens in finite time (motion, perception, fluctuation, emergence, encoding) = contradiction.

No extension = no physics.

Extension = paradox.

Checkmate in one move.”

Every retreat — discreteness, emergence, holography, information, timelessness — either smuggles the continuum back in or destroys physics entirely.

There is no third option

**Dean shows the continuum is incoherent when confronted with motion.**

- **Relativity, quantum field theory, string theory, loop quantum gravity — all rely on the continuum.**
- **Even "discrete" theories (LQG, causal set theory) embed their discrete units in a continuum background (Planck length is still a point on a real line).**

**Holography? The boundary 2Dsurface is still continuous-infinite points dean paradox.**

Then physicists are illusions their brain their neurons their synapses –no thought- too-the same problem Parmenides & the Eleatics & Zeno t have -they don't exist

- 
- **Teleportation? Between A & B infinite points The state at B still occupies space on the continuum-it displaces infinite points-dean paradox**
- **Renormalization, emergence, holography, quantum foam, — all dodges that smuggle the continuum back in**
- **Fluctuations/jitter require change/traversal over infinite points→ dean paradox**
- **Even with no motion the plank length has an infinity of points the eye crosses them in finite time-dean paradox**
- **Even if plank lengths/micro don't move they are embedded in a macro object that does move thus the micro must move also-deans embedded motion problem**

## PHILOSOPHY — Dean Paradox Table

Thinker / System	Core Idea	Dean's Critique (Paradox Trigger)
<b>Heraclitus of Ephesus</b>	Reality is flux; everything is change; stability is illusion.	Even pure flux requires motion. Motion still involves traversing infinitely many points in finite time → Dean paradox.
<b>Parmenides &amp; Zeno (Eleatics)</b>	Motion/change is impossible; only Being is real.	If motion is illusion, then brain, neurons, and thought are illusion → the claim itself collapses.
<b>Plato – Forms</b>	Ideal, perfect forms	Ideal forms are continua with infinite points

Thinker / System	Core Idea	Dean's Critique (Paradox Trigger)
	(e.g., circle).	→ Dean paradox.
<b>Aristotle – Potential Infinity</b>	Infinity is only potential; always another step.	“Always a next step before the first step” → infinite regress remains → Dean paradox.
<b>David Hume</b>	Relations of Ideas / Matters of Fact.	Both rely on same logic and continuum → infinite points persist → Dean paradox.
<b>Immanuel Kant</b>	A priori space/time structure experience.	Continuum contains infinite points → motion paradox remains “potential” always a next step before first step → Dean paradox- Kants system is destroyed..
Kant (anthropology issue)	Universals of reason.	Different cultures exhibit different logics → universality undermined-Kants system is destroyed.
<b>Arthur Schopenhauer</b>	World as representation; Will beneath.	If representation is contradictory, the Will producing it is also incoherent → noumenon collapses.
<b>Georg Wilhelm Friedrich Hegel</b>	Dialectics resolves contradiction.	Motion presents contradiction that cannot be resolved logically.
<b>Friedrich Nietzsche</b>	Truth as perspectival fiction.	If logic itself fails, his framework collapses into same paradox.
<b>Existentialism (Sartre, Camus, Heidegger)</b>	Meaning constructed in absurd world.	If reality itself is structurally contradictory, authenticity is impossible.
<b>Analytic philosophy</b>	Logic, clarity, formal truth.	Built on classical logic + continuum → Dean paradox persists.
<b>Phenomenology (Husserl)</b>	Lived experience of space/time.	Lived space presupposes traversable continuum epoché can't bracket foot-lift But logic is misaligned with reality-thus his systems broken → paradox remains.
<b>Postmodernism</b>	Rejects universal truth.	Ends in performative contradiction.

---

## Non-Classical / Alternative Logics

System	Core Idea	Dean's Critique
<b>Paraconsistent Logic</b>	Allows contradictions without explosion.	Meta-logic still grounded in classical (Indo-European) its meta-logic is classical Indo-European logic which is broken by dean paradox Paraconsistent logic is dust/rubbish → "dust/rubbish" .
<b>Nāgārjuna – Tetralemma (Catuṣkoṭi)</b>	Fourfold logic: true, false, both, neither.	Still operates within a conceptual/meta-logical structure; motion its meta-logic is classical Indo-European logic which is broken by dean paradox tetralemma logic is dust/rubbish → paradox persists.
Tetralemma (internal critique)	Four logical options.	Claim: 4th collapses into 3rd under analysis → system redundancy ("lemma 4 = lemma 3" in your framing).

---

## Dean's Philosophical Conclusion

Across all systems:

- **Flux (Heraclitus)** → still requires motion → paradox
  - **Stasis (Parmenides)** → motion/reality an illusion destroys thought → contradiction
  - **Continuum (Plato, Kant)** → forms or continuum "potential" infinite points → paradox
  - **Potential escape (Aristotle)** → always a next step before first step -infinite regress remains
  - **Alternative logics (paraconsistent, tetralemma)** meta-logic is classical Indo-European logic which is broken by dean paradox → do not remove continuum or motion
- 

## Final synthesis

**No philosophical system escapes:**

- motion
- infinite divisibility
- logical structure

And once those combine:

→ **finite action + infinite points = contradiction**

---

## Dean-style one-line summary

**Whether reality is flux, stillness, logic, anti-logic, or beyond logic — the moment motion or space/extension appears, the infinite-point paradox returns and collapses the system.**

---

## MATHEMATICS

Branch	Core Concept	Dean's Critique
General structure	Mathematics built on the infinitely divisible continuum.	Motion or perception across any interval requires crossing infinite points → paradox.
Calculus	Uses limits and infinite series to model motion.	Infinite steps summed to finite result → “always a next step before the first step.”
Real Numbers	Continuous number line $\mathbb{R}$ with infinite decimals.	No finite process constructs or traverses infinite decimals → paradox.
Cantor Set Theory	Treats infinities as completed objects ( $\aleph_0$ , continuum).	Completed infinity contradicts the idea of endless division.
Geometry	Lines and curves defined as continuous point sets.	Finite length contains infinite points → paradox.
Topology / Manifolds	Structures built from continuous spaces.	Infinite divisibility embedded in foundations.
Gödel Meta-Mathematics	Formal limits of provability.	Dean shows Gödel cannot define “truth,” so the theorem loses meaning.
Non-standard Analysis / Hyperreals	Rigorous infinitesimals.	Adds more infinite points rather than resolving paradox.
Intuitionism	Rejects completed infinity.	Construction of real numbers still involves infinite processes.
Finitism / Ultra-finitism	Accepts only finite mathematics.	Infinite processes still implicitly used in reasoning and induction.
Category / Topos	Abstract structural	Concrete applications still rely on

Branch	Core Concept	Dean's Critique
Theory	foundations.	continuum geometry.
Proof Theory / Formal Systems	Mechanizing mathematical reasoning.	Infinite proofs and symbols embed the same paradox.
Mathematical Platonism	Mathematical objects exist independently.	Platonic continuum still contains infinite points → paradox persists.

### Dean's mathematical conclusion

Mathematics does not solve infinity or motion.  
**It formalizes the paradox using symbols.**

---

## PHYSICS

Physics Framework	Description	Dean's Critique
General Physics	Physical models require space to define position and motion.	Space is infinitely divisible → paradox.
Relativity	Spacetime continuum.	Motion across continuum requires infinite traversal. → paradox.
Quantum Field Theory	Fields defined over continuous spacetime.	Field changes occur over infinite points. → paradox.
String Theory	Vibrating strings in continuous spacetime.	Background still continuous infinite points → paradox.
Loop Quantum Gravity	Discrete Planck-scale structure.	Planck length made of infinite points → continuum smuggled back. → paradox.
Causal Set Theory	Discrete spacetime elements.	Still embedded in mathematical continuum infinite points → paradox.
Holographic Principle	3D physics encoded on 2D boundary.	Boundary surface still continuous infinite points → paradox..
Quantum Teleportation	State appears at new location.	<b>Between A &amp; B infinite points</b> Destination at B state occupies space →

Physics Framework	Description	Dean's Critique
		infinite points displaced → paradox..
<b>Quantum Foam / Fluctuations</b>	Spacetime jitter at small scales.	Change implies traversal across infinite points → paradox..
<b>Renormalization / Emergence</b>	Macroscopic laws arise from microscopic structures.	Emergence still occurs in spatial extension containing infinite points → paradox..
<b>Embedded Motion Problem</b>	Macro motion occurs while microstructures supposedly static.	If macro objects move, microstructure must move as well.

---

### Physics Dilemma (Dean's formulation)

Option	Result
Space exists	Infinite divisibility → Dean paradox
Space does not exist	Position and motion impossible → physics collapses

#### Therefore:

Physics needs space to exist, but space destroys physics.

---

### Dean's Overall Conclusion

Domain	Outcome
Philosophy	Every system collapses when confronted with infinite divisibility and motion.
Mathematics	Symbolically manages infinity but never resolves it.
Physics	Requires spatial extension that generates the paradox.

### Dean's final claim

Human knowledge systems are built on logical and spatial assumptions that collapse when confronted with the **infinite-point structure of motion and perception.**

---

"[Deans] philosophy is the sickest, most paralyzing and most destructive thing that has ever originated from the brain of man."

"[Dean] lay waste to everything in its path...[It is ] a systematic work of

destruction and demoralization... In the end it became nothing but an act of sacrilege
