Science says it investigates reality

**Science says it investigate the
relationship between things *BUT***

**science does not know what those
things are because the**

foundations/fundamentals of science

science does not know what those

foundations/fundamentals are

Thus science really is just talking

thru its ass when it tell us what

REALITY IS

Take gravity a fundamental of

physics

**Take gravity we are told things fall
because of gravity But science does
not know what gravity is**

**[https://answersingenesis.org/physics/
gravity/](https://answersingenesis.org/physics/gravity/)**

It would seem that this everyday gravity force should be one of the best understood concepts in science.

However, just the opposite is true. In many ways, gravity remains a profound mystery. Gravity provides a stunning example of the limits of current scientific knowledge.

No you say

Well lets take charge we are told there are electrons with negative charge and protons with positive charge But physicist don't know what a charge is

<https://www.education.vic.gov.au/school/teachers/teachingresources/discipline/science/continuum/Pages/electrostatics.aspx>

Scientists do not know exactly what charge is or how the two sorts of charge differ from one another; however each affects itself and its opposite form.

No you say

Well physicists talk a lot about matter particularly dark matter

https://en.wikipedia.org/wiki/Dark_matter

Dark matter is a hypothetical form of [matter](#) thought to account for approximately 85% of the matter in the [universe](#)

<https://pursuit.unimelb.edu.au/articles/exploring-the-most-unknown-universe/>

One leading hypothesis is that dark *matter* is made up of exotic particles that *don't* interact much with ordinary *matter*

<https://science.nasa.gov/astrophysics/focus-areas/what-is-dark-energy>

What Is Dark Matter?

By fitting a theoretical model of the composition of the universe to the combined set of cosmological observations, scientists have come up with the composition that we described above, ~68% dark energy, ~27% dark matter, ~5% normal matter. What is dark matter?

***BUT* physicist don't even know
what matter is**

<https://en.wikipedia.org/wiki/Matter>

Summary

It is fair to say that in [physics](#), there is no broad consensus as to a general definition of matter, and the term "matter" usually is used in conjunction with a specifying modifier.

***No you say physics deals with
forces***

And what is a force

<https://en.wikipedia.org/wiki/force>

In [physics](#), a **force** is an influence that can change the [motion](#) of an [object](#)

and what is an influence

to [cause](#) something to be [changed](#):

sounds like circularity ie a force is an influence

But what is an influence nothing but a force

Try this circularity

<https://www.physicsclassroom.com/class/newtlaws/Lesson-2/The-Meaning-of-Force>

A force is *a push or pull upon an object*

And what is a push

<https://study.com/academy/lesson/push-pull-forces-lesson-for-kids-definition-examples.html>

A push is *the force that moves an object away*

**Nothing but a force again
circularity**

**Thus we see science does a lot of
talking about reality and the
interaction between things based upon
its foundations/fundamentals**

**But it cant even tell us what its
foundations/fundamentals are**

**Thus it really is talking thru its ass
when it tell us what *REALITY*
*IS***
